In this abridged edition we present merely a price list of the articles offered in and a few condensed pages from our Guide to Horticulture. In the unabridged edition, every variety named in the within price list is described-a large portion of them being beautifully illustrated; and the descriptions and illustrations are truthful, not exaggerations. It is a book of one hundred and fifty-two pages, the size of these, with two colored plates and lithographic cover; and gives full instructions for planting, pruning, care and management of the Fruits, Flowers and Vegetables offered.

In order to place this Guide in the hands of all persons in any way interested in fruit growing or gardening, we mail it free to any one sending us an order from this abridged edition, to the amount of twenty-five cents or more and who requests us to do so. To those who send Ten Cents, (which is not one half the cost of the Guide alone) we mail a bulb of the lovely Variegated Tuberose, three bulbs of Gladiolus and the Guide.

## Lovett's Manual of Ornamental Trees and Plants

is the title of our large Descriptive Catalogue of Ornamentals, and it is the most elaborate, comprehensive and complete Handbook of Ornamental Trees and Plants ever issued by any horticultural establishment; being lavishly illustrated throughout and admirably printed on heavy paper. It should be in the hands of every owner of a country home as a book of reference and a guide to aid him in the improvement and adornment of his grounds. In it will be found, accurately and clearly described, almost every valuable variety of Deciduous Flowering Shrubs, Evergreen Trees and Shrubs, Deciduous Shade Trees, Hardy Vines and Creepers, Hardy Harbaceous Plants, Ornamental Hedge Plants, etc., most of which are beautifully illustrated with engravings specially sketched from nature. It is a work of 112 pages, size of this Guide, on extra heavy paper.

How to Lay Out the Home Grounds to advantage, and all details relating to the Laying Out and Planting of Lawns and Small Places, with selections for the best effects, are carefully considered. An introduction, and an essay on the care, culture, and management of Ornamental Trees and Plants, by a celebrated landscape gardener and horticultural writer, furnish instructions and suggestions on ornamental planting, and carefully drawn plans are given especially for small places, with planting lists and general directions. This is a very valuable feature and worth many dollars to the prospective planter.

The book is trustworthy and authoritative. The contents are arranged botanically, and the common English names also given. With each copy of the Manual are mailed several chromo-lithographs in oil, produced at great experise especially for this work. Mailed for Fifteen Cents.

## FOR THE CHILDREN.

"Sweet childish days, that were as long As twenty days are now."-W ORDSWORTH.
A love of beautiful flowers and the fresh and tender effects of nature is inherent in all of us, but too often this lingering influence of the original garden upon American children is permitted to fade and perish for lack of encouragement. Give a child the care of even one plant, and his interest is at once aroused in the wondrous growth of leaf and blossom ; his powers of observation strengthened and all the finer qualities of his nature developed; while at the same time much valuable practical knowledge is acquired. Parents and others can be well associated in the management of the child's garden and experience much pleasure in doing so. The "Children's Corner " can easily be made the most interesting part of the garden, and with a trifling oversight induced to yield a wealth of flowers for cutting and decorating the house or church.

With this end in view we have, with much care and thought, prepared the following collections of easily managed seeds and bulbs. Kindly glance over this list. We are sure all will be readily convinced that in no other way can so much pleasure and profit be secured at such slight cost. The only way it is possible for us to give so much for the money as we do in these collections is by growing the varieties offered in vast quantities and putting them up in lots of hundreds at a time. Therefore no change or alteration can be made in any of them. All will be sent by mail at prices offered, and all the seed packets are full-sized ones -not a few seeds only in a packet, as are so often sent out in collections.

## Collection No. 1, 25c. Flower Seeds.

Ten full-sized packets; all choice varieties; viz: Sweet Alyssum; Balsam, finest double mixed; Mignonette; Pansy, a superb strain; Petunia, choice mixture; Phlox, all colors; Garden Pink, very fragrant and showy; Portulacca, a great favorite; Sweet Peas, all varieties mixed; Zinnia, a favorite of the autumn.

## Collection No. 2, 50c. Flower Seeds.

Ten full-sized packets; finest varieties, viz: Aster, the perfection mixture; Cosmos, the finest autumn flower for cutting; Carnation, the beautiful Marguerite; Campanula (Cup and Saucer), very beautiful and odd; Crimson-eye Hibiscus, a beautiful perennial novelty; Nasturtium, choicest dwarf mixture; Pansy, giant mixture, all colors; Phlox stellata, the prettiest of all; Tulip
 Poppy, intense scarlet, very beautiful; Verbena,grand mammoth. Collection No. 3, \$1.00. Flower Seeds.
This consists of Collections Nos. 1 and 2 and a full-sized packet each Pink Beauty (Kostelezkya) and Blue Beauty (Centrosema). shown on colored plate.

## Collection No. 4, 25c.

 Vegetable Seeds.Selected especially for boys. Ten full-sized packets, viz: Bastian's Early Beet, Early Cucumber, Silesian Lettuce, Netted Gem Musk Melon, Red Wethersfield Onion, Guernsey Parsnip, Long Scarlet Radish, Acme Tomato, Purple Top Turnip, Mapledale Pop Corn.

## COLLECTIONS.

## Collection No. 5, 50c. Vegetable Seeds.

Sixteen full-sized packets, viz: Eclipse Beet, an all seasons' variety; All Seasons' Cabbage, a splendid sort; Lomg Orange Carrot, best for general use; White Plume Celery, a favorite early sort; Evergreen Cucumber, fine for table use or pickling; Big Boston Lettuce, crisp and tender; Miller's Cream Musk Melon, of most delicious quality; Hoosier King Watermelon, the finest of all; Prizetaker Onion, largest and best; Hollow Crown Parsnip, very smooth and sweet; Ruby King Pepper, mild and prolific; Sugar Pumpkin, finest for pie making; Early Red Turnip Radish, best early; Chartier Radish, does not get pithy or hot; Summer Squash, best bush sort; Champion Tomato, large, solid and smooth.

## Collection No. 6, \$1.00. Vegetable Seed.

This consists of Collections Nos. 4 and 5 and also the following: 1 pint Dwarf Wax Beans, stringless and tender; 1 pkt. Burpee's Bush Lima Beans; $1 / 2$
 pint Country Gentleman Sweet Corn, the sweetest and the best; 1 pkt. Premium Flat Dutch Cabloage, the favorite winter variety; 1 pint Market Garden Peas, very hardy, productive and delicious; 1 pkt. China Winter Radish, excels in quality and keeping; 1 pkt. Sandwich Island Salsify, an excellent substitute for oysters; 1 pkt. Faxon Squash, best early, best late, best keeper and best in quality at all times; i pkt. Paragon Tomato, superior for table or canning, the whole forming a complete garden for only one dollar.

## Collection No. 7, 25c. Bulbs. 12 Choice Bulbs by mail for only 25 cents.

 6 fine mixed Gladiolus, 2 Tigridias, different varieties; 1 Dwarf Pearl Tuberose. 1 Variegated-leaved Tuberose; 2 Oxalis, different.
## Collection No. 8, 50c. Bulbs. 30 Splendid Bulbs by mail for 50 cents.

6 Gladiolus, extra mixed; 4 Gladiolus, in colors (1 each Pink, Red, Yellow, Variegated); 3 Tigridias, all different; 2 Dwarf Pearl Tuberose; 2 Variegated-leaved Tuberose; 2 Madeira Vine: 2 Cinnamon Vine; 1 Galtonia candicans; 2 Apios tuberosa; 6 Oxalis, in tiwo varieties.

Collection No. 9, \$1.00. Bulbs. Grand Collection of 50 splendid bullos by mail for only $\mathbf{\$ 1 . 0 0}$.
10 Gladiolus, extra mixed; 4 Gladiolus, in colors (Pink, Red, Yellow, Variegated); 6 Tigridias, three varieties; 2 Dwarf Pearl Tuberose; 2 Variegated-leaved Tuberose; 2 Madeira Vine; 2 Cinnamon Vine; 2 Galtonia candicans; 2 Apios tuberosa; 12 Oxalis, in two varieties; 1 Mad. Crozy Canna; 1 Cooperia pedunculata. 1 Montbretia; 1 Lovely Tuberous Begonia; 2 Zephyranthus, different varieties.

This collection will produce a beautiful display of flowers and is quite complete.

"Ah! what would the world be to us,
If the children were no more? We should dread the desert behind us Worse than the dark before."-LONGFELLOW.

It is with both pride and confidence that we offer the following novelties. The record of each variety has been carefully investigated and we sincerely believe that one and all will prove decided acquisitions to their respective classes. Scores of miscalled "novelties" are yearly foisted upon the public, only a small percentage of which possess any real superiority over well-known kinds and after the first disappointing trial sink into oblivion. The splendid new varieties here brought together possess such important features of merit and individuality as to insure the speedy and permanent adoption of them as standards. We urge all to make a trial of as many of these veritable gems as they have facilities for growing. We send all by mail at prices named unless otherwise noted.

THE FAXON SQUASH.

A distinctive feature of this squash is that the ripe squashes vary in color, some of them being pale yellow with still paler yellow stripes in hollows; while others are green, mottled and faintly striped with a lighter green. (See colored illustration on cover). In this respect it is different from all other varieties, and after years of careful trial we have found that it follows its type absolutely true. We offer it as a distinct new vegetable,

The flesh is a deep orange yellow, cavity very small and seeds few; the special peculiarity, however, is that, while uncooked it appears to have a shell like other squashes; when cooked there is practically none, the shell or inedible part being only about as thick as a sheet of writing paper. It is the best squash we ever tasted-sweet and very dry-and for squash pies it must be tried to be appreciated. A trial will convince all of its great value.

It matures early and can be used as a summer squash. It is the best winter variety we know, being ? very late keeper. We have repeatedly had specimens of it in our cellar in perfect condition in April and May. It is the only squash we ever saw in which every specimen is of superior quality without regard to size or whether it is ripe or green. This is a very desirable feature, as many squashes (the Hubbard especially) must be thoroughly ripe before frost, or the crop is lost. It is not so with "The Faxon Squash;" every specimen can be used.

Very early, enormously productive, of medium size and the best possible quality; we fully believe that this new variety is destined to become a standard amongst squashes both for home use and market purposes."

The above is the description of the M. B. Faxon Co., who developed this noble vegetable and of whom we purchased the entire stock of seed, together with their entire seed business. We have tested it ourselves and find it of the very superior quality claimed by them. Mr. M. B. Faxon further informs us it is such a remarkable keeper that he has specimens in perfect condition, grown in 1893, and which have been kept in an ordinary cellar without any special treatment or care. Also, that unlike other squashes, the Faxon is fit for use when no larger than one's two fists-rendering it an all-the-year-round variety and the earliest squash of good variety.

A famous squash specialist, and the best authority upon the squash in the world, wrote us recently after having grown the Faxon for five years, that it is by far the finest in quality and the best in every way of any squash yet produced. With the Faxon no one needs any other variety; for it is the best early, the best late, the best keeper and best in quality, and for all purposes all the time. It gives the grower the finest of squashes throughout the entire year.

Price, packet, $10 \mathrm{c} ; 3$ pkts. for $25 \mathrm{c} ;$ oz., $20 \mathrm{c} ; 1 / 4 \mathrm{lb}$., 60 c ; pound, $\$ 2.00$.

A magnificent straih for fall and winter use, forming mammoth heads of uniform size, which are exceediugly hard and solid. It has a short stem and grows very compactly, with few outer leaves, this feature allowing the plants to be set close together, economizing both space and time. The mammoth heads are thick throughout, and rounded on the top, and are fine-grained and tender to a marked degree, surpassing in this respect any of the other large growing varieties.

The Autumn King is very pure stock, growing uniformly true to type, and sure to make a perfect head. Owing to the small outer leaves, it will produce a heavier crop per acre than any other cabbage. Pkt., 10c; oz., $25 \mathrm{c} ; 1 / 4 \mathrm{lb}$., 75c; lb., \$2.50.

## COLUMBIAN MAMMOTH WHITE ASPARAGUS.

A most distinct variety, and from its great size and yield, beautiful white color and superior quality, the most valuable, and will quickly become the most popular sort as yet offered. The stalks are of the largest size, and are produced very early and abundantly. They are clear white in color and remain white until they are four inches above the surface.

The crown or bud is much smaller than the stalk, which is a distinctive feature of the variety. Wherever it has been grown it commands an extra price, not only in the market, but also from canners, who can readily sell it at a high price as a special brand. Thestalks are so exceedingly tender, so large, and so fine in quality that it is unrivalled for the home garden.
Seeds, 10c. per packet; 3 for 25 c ; oz., 20c; $1 / 4 \mathrm{lb}$., 60 c ; pound, $\$ 2.00$.
Plants, 1 yr., doz., $50 \mathrm{c} ; 100, \$ 1.25 ; 1000, \$ 8.00$. 2 yrs., doz., 60 c ; $100, \$ 1.50 ; 1,000, \$ 10.00$. One year roots by mail, postpaid, at dozen rates. If wanted by mail at 100 rates, add 25 c , per 100.

## KEENEY'S RUSTLESS GOLDEN WAX BEAN.

This is the long-looked-for bean, as it combines hardiness and productiveness with fine quality. A strong-growing bush variety of remarkable vigor and freedom from rust. It sends out short tendrils, on which pods form, in addition to those near the central stalk of the plant, which accounts for its wonderful productiveness, increasing under favorable conditions from 100 to 150 fold.

The pods are meaty and well filled, thick-flat when young, and semi-round later; of a rich yellow color and fine quality, entirely stringless, even when large enough to shell. If the pods are picked as fast as formed, the plant continues to furnish a bountiful supply for an unusually long season.

The packets contain an ounce of beans, about 60 to 75 in number, aud if planted one bean in a place, 10 inches apart in the row, and the rows 24 to 28 inches apart, they will produce under favorable conditions, a bountiful supply for a family of six or eight persons. Pkt., 15c; 2 for 25 c.

The introduction of the brilliant Sunbeams Canna marks ment of this most popular plant. Sunbeams is very simi standard of excellence Madam Crozy, equally floriferous, $21 / 2$ feet high in average soil, but can be forced by watering to attain a height of 4 to 6 feet. The bright green foliage posed, and the enormous flowers are incessantly produced veloped trusses. They average over five inches in diameter enduring in texture. The color is a clear and brilliant spots of orange, so faint as not to be seen at a distance of do not injure the glowing goiden effect of the great thing in the has ever to compare for bril ding effect. June it is at dazzling bloom, frost undim

masses and ribbon bedding with Cannas of contrasting tints Sunbeams is without a peer, as its firm and brilliant color, correct habit and wonderful floriferousness is beyond comparison, superior to existing yellow Cannas, with their neutral colors and late and shy

The illustration is in no way exaggerated. The petals are broad and well thrown back as shown; individual flowers having been produced that measured six inches across. It is a great improvement in every way upon Montefiore and Florence Vaughan, in color, in habit, in size of flowers and flower heads, and in profusion of bloom. Although by far the finest yellow Canna yet offered and one of the rarest ever produced of any color, we make the price in keeping with the times. Ea., 50c; 3 for $\$ 1.25$; dozen, $\$ 4.50$ (by mail). Prices by the hundred upon application.

## CRIMSON RAMBLER ROSE.

## Awarded gold medal at Antwerp Exhibition in 1893 for the best new plant of the year.

This superb novelty is from Japan and introduced into England in the fall of 1893. Never before has a new Rose created such excitement or been so heartily welcomed. The plant is of extremely vigorous growth making shoots from eight to ten feet during the season, rendering it a charming Pillar Rose. It is also magnificent in bush form, and for covering buildings, trellis, etc., it cannot be excelled. When pegged to the ground, marvelous heads of bloom are produced. One of the striking characteristics of this Rose is its remarkable color, which is of the brightest crimson and which remains undimmed to the end-showing none of the objectionable purplish tint so common in crimson roses. The flowers are produced in great pyramidal panicles or trusses, each carrying from thirty to sixty blooms, the individual flowers measuring from one to one and a half inches in diameter and remaining perfect on the plant for upwards of two weeks, with their freshness of color unimpaired. The foliage is almost evergreen, is bright green and glossy, contrasting finely with the bright crimson of the flowers. Exceedingly hardy, having successfully withstood the test in exposed situations for two winters.

We give this Rose our unqualified endorsement as being exceedingly unique and beautiful.
"Crimson Rambler at the National Horticultural Society of France was awarded the gold medal as the best new plart. As a proof of its persistency, it may be mentioned that when cut in proper condition the flowers will remain fresh in water for two weeks."
"At this date (July 14) this is a grand Rose. I have a dozen plants on prepared land, did not prune much, merely shortened back, staked to support long growths, gave liberal mulch, and the clusters of bright crimson flowers at this date are beautiful. Or one shoot alone I counted 300 blooms."-G. W ythes, in The Garden.

Well. established plants from $21 / 2 \mathrm{in}$. pots, ea., 30 c; 3 for 75 c . (by mail). Strong plants from 4 in. pots, ea., $40 \mathrm{c} ; 2$ for 75 c . (too large to mail).

# THE LOVETT COMPANY. <br> <br> GRAND NEW TIGRIDIAS. 

 <br> <br> GRAND NEW TIGRIDIAS.}

Startling improvements have of late been made in that favorite summer bulb, the Tigridia. The range of color has been greatly extended and the habit and size of flower much improved. After an exhaustive trial we have selected Tigridias grandiflora violacea and rosea as the handsomestand most vigorous of the novelties recently issued. They are most beautiful flowers of the largest size, often exceeding six inches in diameter. The color of Violacea is a most lovely violet or rather lilac-purple, with unique shell-like markings of white and dark maroon in the sculptured interior. Rosea is of a delicate rose color, with corresponding markings of yellow and brown within the cup. These splendid novelties are very robust in growth, Violacea being the stronger of the two. They succeed in any fairly rich soil, producing their exquisite flowers in constant succession for many weeks. Ea., 15c; 2 for 25 ; dozen, $\$ 1.25$.

## RICINUS ZANZIBARENSIS.

Introduced to cultivation for the first time last year; and is grand and beautiful beyond comparison with the older varieties. The plants attain great dimensions, presenting a splendid aspect with their gigantic leaves, and robust, compact habit. The different varieties included in our mixture have light and dark green leaves, and some of coppery bronze, changing to dark green with reddish leaves. These varieties never grow up tall and leggy but retain the leaves near the ground in a neat, pyramidal shape, quite similar to a giant Aralia Sieboldi. As single specimens or groups on the lawn they are very effective. The seeds are very large, curious and attractive. Pkt., $15 \mathrm{c} ; 2$ pkts. for 25 c .

## ALBINO TUBEROSE.

This addition to the list of Tuberoses possesses a number of distinctive features that cannot fail to render it very popular. The flower spikes are large and are evenly filled with single reflexed blooms of the purest waxy-white. Entirely free from the objectionable brown and purple tints on back of petals, so common with the double varie ties, rendering it one of the most valuable of all plants for cut flowers. In fact, the flowers are so chaste and pure that when first seen they might be taken for a gigantic Stephanotis or Jessamine. This resemblance is heightened by the fact that the perfume is quite similar, being by no means so heavy as in old varieties. Flowers in July and August, many weeks before the old varieties, throwing up from two to five flower stems from a single bulb, and these again are often branched, making it the most floriferous of all Tuberoses. Ea., 10c; 3 for 25c; doz., 75 c .

## CAPE FUSCHIA.

(Phyglia Capensis.)

A most charming and free-blooming plant; always in flower and adapted to endure the hottest and driest situation. It grows and blooms freely while Geraniums are perishing from heat and drought. When only a few inches high plants throw up many bold spikes completely crowded with showy scarlet drooping flowers, which are per-
 sistently renewed from May until late Autumn, when the plants can be brought into the house for Winter blooming. It is a fine bedding plant to grow singly or in masses, doing well on poor soil and in almost any situation. Seeds, 25c. pkt. Plants, ea., 20c; 3 for 50c.

## GIANT OF CALIFORNIA PETUNIA.

[^0]A beautiful, continuous flowering new plant, with pure white Sweet Pea-like flowers, produced in sprays of from twelve to twenty blossoms each. Nothing surpasses it as a decorative plant for the window or conservatory. The pinnated, feathery, fern-like foliage is a cheerrul light green, and has always a neat and clean appearance. It is of easy culture, growing in almost any light position. Its great freedom of bloom being seldom without flowers, the grace, purity and beauty of its flowers, and the neat habit and fine appearance of the whole plant will undoubtedly make it one of the most popular plants in cultivation. Especially valuable for cutting. Owing to its ease of culture and beauty of both plant and flower, it is one of the most valuable and desirable home plants that has yet appeared. Ea., 20c; 3 for 5 . c; doze, $\$ 1.50$.

## BLUE SPIRAEA.

## (Caryopteris mastacanthus.)

One of the finest novelties ever received from China, and promises to become one of the most desirable hardy shrubs known; having proved entirely hardy at Boston, Philadelphia and the north of Germany. Flowers almost the entire summer, continuing late into fall, when all other plants of its character cease. Grows even more readily than a Geranium, even in the driest places, and will become a favorite for cutting. The flowers,
 whlch are produced in the most astonishing profusion, are clustered in rich lavender-blue masses; one of the rarest and most pleasing colors. If potted and brought into the house it will bloom, profusely through the winter months, giving an abundance of graceful sprays. The beautiful flowers are somewhat fragrant and the leaves aromatic. Does not appear to be troubled with any insect pests whatever. Bees are very fond of this plant and visit it when even the hardiest native flowers have ceased to bloom. Everyone should plant this splendid novelty. Strong plants, əa., 20c; 3 for 50 c. Seeds, pkt. 25 c .

## NEW HIBISCUS, <br> "Crimson Eye."

After many years of careful selection this variety has assumed a typical form, and can be relied upon to come true from seed in every instance. It is an elegant plant of rapid growth, stately habit, and striking in appearance; is perfectly hardy, robust, with large, light green leaves, having red stems; and is an incessant and profuse bloomer for two months. The flowers are of immense size, often exceeding six inches in diameter and are produced in such abundance that a well developed plant will give several hundreds of them in a season.. The color is a pure clear ivory white, with a large eye of rich velvety crimson in the centre of each flower; forming an effective contrast.

It is one of the easiest culture and will succeed anywhere; the only objection we have heard made to it was by some regarding it as a trifle gross in habit. Its growth is so strong and rapid, and foliage so large and full that it $\mathrm{i}_{\mathrm{S}}$ tropical in effect and should be used accordingly. Seeds germinate with the utmost freedom. Seeds, 10 c per packet; 3 pkts. for 25c. Plants, 1 yr., ea., 20c; 3 for 50 c .2 yrs., ea., 25c. 3 for 60 c. Extra strong, ea., 35 c ; 3 for 75 c , (all by mail except last size quoted).

# A FRUIT GARDEN FOR \$5.00. 

We are induced to make this remarkably liberal offer for a threefold reason: to introduce our plants into new homes; to bring the wholesome Small Fruits within the reach of all; and to provide a good selection for those who are not familiar with the different varieties of them. By this method we are enabled to supply an assortment of plants that will furnish an abundant supply of fruit for a moderate-sized family for a long season-from early to late. Please understand, the value of the plants must not be judged by the low price asked for them. All of these twenty varieties are trustworthy, reliable sorts, which if purchased at our regular catalogue prices would amount to $\$ 8.38$. The quality of the plants is just the same as though they were selected from the Guide at regular rates.

## THE COLLECTION.

25 Lovett Strawberry, a superior early kind.
25 Dayton Strawberry, a grand midseason sort.
25 Gandy Strawberry, best late variety.
12 Lovett Raspberry, best early black cap.
12 Kansas Raspberry, best late black cap.
12 Marlboro Raspberry, largest early red.
12 Cuthbert Raspberry, best late red.
6 Golden Queen Raspberry, finest yellow.
6 Japanese Wineberry, a great novelty. 12 Lucretia Dewberry, immense and delicious.

I2 Early Harvest Blackberry, very early. 12 Lovett's Best Blackberry, the best of all.
6 Fay's Prolific Currant, largest red.
6 White Grape Currant, the finest flavored.
3 Black Champion Currant, the best black.
3 Industry Gooseberry, very large and good.
2 Dwarf Rocky Mountain Cherry.
3 Improved Dwarf Juneberry.
2 Tree Cranberry.
3 Buffalo Berry.

The entire collection will be sent either by mail or express at the price named. If sent by express much stronger plants well be selected, but the charges must be paid by the purchaser.

But, necessarily, this offer must have its conditions. Since our ability to supply them at such a low figure depends upon a large number of the same collection being taken up and packed at one time, it must be understood that we can make no change whatever in the collections, but it must be taken exactly as offered, Therefore please do not ask us to depart in anyway from our offer, as we cannot do it.

## TEEE IETIN PRUNER.

The Strongest Hand-shear Made.
Made of the finest steel, with dies; a giant in strength and will cut through half an inch of dry oak. It makes a smooth, clean cut like a knife, but a great deal easier and twice as quick. Made in 2 sizes. No. 1, \$1.00 each; No. 2, \$r.50, by mail.

## TFE 工円丁IIN P尺UUNEF。

The Strongest Hand－shear Made．
Made of the finest steel，with dies；a giant in strength and will cut through half an inch of dry oak． It makes a smooth，clean cut like a knife，but a great deal easier and twice as quick．Made in 2 sizes． No．1，\＄1．00 each；No．2，\＄1．50，by mail．

For a long time fruit growers and amateurs alike have been looking for a strawberry that was both large and very early, possessing also the necessary properties of vigor and productiveness of plant, and firmness, fine appearance and good quality of fruit. In Crystal City we have earliness, but its berries are insignificant; in several other varieties large size, but they all ripen in mid-season or late. The Eleanor is second to none in earliness, ripening with Crystal City and in advance of all others; in size rivaling the Sharpless, retaining its size well to the end of the season; in productiveness surpassing the famous Crescent; in firmness equal to the Wilson, is of bright scarlet color and has few equals in quality. Among other vaiuable properties of the Eleanor may be mentioned its uniform size, color and shape, never cockscombed, and coloring evenly all over with no green tip, a strong staminate or perfect blossom, and especially its vigor; a field of it after picking season being as green as a field of clover, when all other varieties are sere and brown.

This Strawberry is a chance seedling found in Atlantic County, New Jersey, and has now been thoroughly tested in field culture on an extended scale for several years. It is by far the earliest large berry and the most prolific early variety yet offered. Being fully convinced of its great value we have purchased the entire stock and control of the variety and offer it this season for the first. We take much pleasure in presenting upon the front cover a photograph of sweet little Eleanor Combe, daughter of the discoverer and in whose honor the variety was named.

The colored plate of the Eleanor was sketched from a photograph and is in no manner an exaggeration. We are sure everybody will be more than pleased with this truly grand variety and we recommend all to get plants of it at once, if but a few. Ea., 25c; 3 for 60 c; doz., $\$ 2.00 ; 100, \$ 10.00 ; 1,000, \$ 75.00$.

## MARY.

## The Largest Strawberry Yet Produced.

Among all the strawberries none have proved finer than Mary. This and its companion, Henry Ward Beecher, lead them all in size, beauty ano productiveness. They differ in many respects, ripen at different seasons, and both are so very good that the one should always accompany the other.

To describe the Mary in a few words is to say that it is of the largest size, the most prolific in bearing, the most beautiful in appearance, and the firmest large strawberry yet produced. The berries are uniformly of conical form with blunt apex, regular in size and shape, never cockscombed, deep crimson in color, and of a rich high quality. Its great firmness and solidity render it of exceptional value for distant shipment and it keeps in good condition and retains its fresh color remarkably well. In season it is medium to late and the fruit retains its large size to the end. Four consecutive seasons of fruiting enable us to speak intelligently of this variety and we have yet to find a defect in it.

The commission merchant to whom has been consigned the shipment of Mary strawberries for the past two years is enthusiastic in its praise, as the following letter will show:

New York, June 12th, 1894.
The Lovett Co.-Gentlemen : I have handled strawberries for the past twenty-seven years in this market. During these years almost every variety has come to us, on sale. This season and last we became acquainted with the Mary strawberry, grown by H. H. Alley. We find it one of the best in color, flavor and size. It hac always bronght the highest market price, often from five to ten cents more per quart than the best of other va rieties in market with it.
L. Shanley Davis.

Ea, $15 \mathrm{c} ; 2$ for 25 c ; doz., $\$ 1.00 ; 100, \$ 5.00 ; 1,000, \$ 35.00$.

## HENRY WARD BEECHER. <br> The Most Reliable Very Large Strawberry.

For enormous yield of large, firm berries, under favorable and unfavorable circumstances, in seasons of excessive rain and seasons of drought, this is the berry to plant. It may ba termed "the reliable," and is superb under all manner of trials and conditions. Not so large as the Mary, yet very large when compared with other varieties; not so beautiful, yet a handsome berry. It possesses, however, the same firmness and high quality, and is so sturdy, large, productive and enduring, none should fail to plant it. It is a cross between the Champion and the Sharpless, and possesses all the valuable properties of both parents. In fruit, the firmness and rich color of the Champion in its palmy days, and the size of the Sharpless; while in plant it has the strong habit and perfect blossom of the Sharpless and the sturdiness and productiveness of Champion. Llke the Mary, this variety has, for several years been subjected to the severest tests without developing a single defect. Blossoms perfect. Season early to medium. Ea., $15 \mathrm{c} ; 2$ for 25 c ; doz., $\$ 1.00 ; 100, \$ 5.00 ; 1,000, \$ 35.00$.

SPECIAL OFFER : For $\$ 1.00$ we will mail 3 each of Eleanor, Mary and Henry Ward Beecher; for $\$ 1.75,6$ each; for $\$ 3.00$ a dozen each; for $\$ 5.00,25$ each; for $\$ 9.00,50$ each; for $\$ 17.00$, one hundred each; all by mail.

## Scribner's Fungus Diseases of the Grape and other Plants.

A thoroughly practical work prepared especially for the Vineyardist, Fruit Grower and Gardener of to-day and treats the subject presented in the freshest and most practical manner. IT CONTAINS OVER SIXTY ILLUSTRATIONS DRAWN FROM NATURE. The details are quite freely given in each case and remedies suggested with mode of application. It will be found to supply all that is necessary to the intelligent fruit grower and vineyardist to enable him to prevent fungus diseases, or to fight them when they appear. A carefully prepared and complete index adds completeness to the book. Price, by mail, post paid, paper cover, 50 cents; cloth, 75 cents.

Lovett's Best has proved itself worthy of heading the list of Blackberries. It has now been fruited in all parts of the country-North, South, East and West-and this is the universal verdict of fruit growers and horticulturists. The past season we had a field of ten acres of it in bearing and in comparison with all the popular varieties it not only yielded more fruit and continued longer in bearing than any other variety, but the berries brought a much higher price in market. In brief, this ten acres of Lovett's Best gave the largest returns and the greatest profit per acre of anything in the way of berries that we have ever grown. It is a thoroughly reliable Blackberry of large size, with a cane of iron-clad hardiness, and unites not only these two invaluable properties in an eminent degree, but possesses in addition the merits of ripening early, great productiveness, entire freedom from disease, and double or rose blossom, strong, vigorous growth of cane, extra high quality, jet black permanent color and fine appearance. It ripens early and continues to bear until the close of the season. We picked steadily this summer up to August 25th and there were then green berries on the vines, and this, too, in a period of intense drought, having had no rain to speak of for over two months. We pronounce it the best Blackioerry for the fruit grower and the best for the family garden. Price of splendid root-cutting plants, ea., 10c; 3 for 25c: doz., 75 c ; $100, \$ 3.50 ; 1,000$, $\$ 2$. 00 .

## CHILDS' EVERBEARING TREE or TOPSY BLACKBERRY.

A remarkably popular sort, the demand for plants of it being so great as to exhaust our supply each year long before the close of the season. "For a blackberry it is the largest, finest flavored, most prolific, fruiting for two months and requires no stakes. This fine novelty** is surely one of the most desirable new things we ever offered, and what we say of it we speak of what we have seen and what we have tested, and not from what others say. It grows from five to seven feet high, branching freely into tree form*straight and erect, requiring no stakes. The berries are of enormous size, equalled only by the Erie; borne in great clusters which commence to ripen early in July and continue into September, making its fruiting period fully two months or more. The finest blackberries we ever ate we picked about September first from some of these plants which had been ripening fruit since July 8th. They are exceedingly sweet, juicy and delicious, melting in the mouth without a particle of hard core. Its delicate flavor, great productiveness, enormous size, long season of bearing and perfect hardiness in the coldest part of the country, make it the most valuable of all berries for family use."

Mrs. C. A. Barton, Santa Anna, Cal., says: "Received the Wineberry and Tree currant; they are growing finely. If they do as well as your Tree Blackberry I shall be more than pleased with them. Have taken up all other Blackberries as we want nothing but the Tree.'"

The above description and illustration are reproduced from Childs Catalogue.

Like Wilson's Early it is undoubtedly a natural hybrid, found growing wild in New Jersey. It was transplanted to the garden and developed by us some six years ago, who first made it known. Ea. 20c; 3 for 50 c; doz., $\$ 1.50 ; 100, \$ 10.00$

## A Raspberry which ripens its fruit before Strawberries.

The earliest Raspberry known. The berries are of a golden straw color, as large as Cuthbert, and ripen here in April, a month before Hansell, "oeforestrawberries, and before the earliest of the standard Raspberries of the past have hardly awakened frons their winter rest. The bushes are distinct from all others, growing like trees, 6 to 8 feet high, with spreading tops; and all along the branches large, white, well-shaped blossoms are pendant, which are soon followed by the great, sweet, glossy, golden, semi-translucent berries. The plants when wellestablished, will surprise one with their abundance of fruit. The history of this variety is as follows: "Some ten years ago I instructed my collector in Japan to hunt up the best wild Raspberries, Blackberries and Strawberries that could be found. Several curious species were received the next season, and among them a red and also a dingy yellow, unproductive variety of Rubuspalmatus. One of these plants, though bearing only a few of the most worthless, tasteless, dingy yellow berries I have ever seen, was selected solely on account of its unusual earliness, to cross with Cuthbert and other well-known Raspberries. Among the seedlings raised from this plant was this one, and, though no signs of the Cuthbert appear, yet it can hardly be doubted that Cuthbert pollen has effected some of * the wonderful improvements to be seen in this new variety." The preceding is the description of Mr. Luther Burbank, the originator. A year ago it could be had only at $\$ 5.00$ per plant. We offer strong plants by mail at 40 c. each; 8 for $\$ 1.00$.

## SOUTHERN BEAUTY MUSK MELON.

A melon of great merit, combining high flavor, productiveness and long keeping qualities, rendering it exceedingly valuable for the market gardener as well as for the amateur. It grows to a medium large size, with a firm, tough rind, thickly netted; withstands wet weather to a wonderful degree, and is almost proof against the vine borer, which plays such havoc in some localities. The flesh is thick and green; with a rich, sugary, spicy or aromatic flavor that is simply delicious. It is one of the best shipping melons that can be grown, keeping firm and in the best condition for ten days after ripening, and is also wonderfully prolific. Possessing so many valuable properties, all will do well to plant it this season. Pkt., 10 c ; oz., $25 \mathrm{c} ; 1 / 4 \mathrm{lb}$., $75 \mathrm{c} ; 1 \mathrm{lb}$., $\$ 2.50$.

The Wineberry has caused no little stir in the horticultural world. It pleases everyone and its ornamental character, to say nothing of its fine fruit, renders it a highly desirable acquisition in every garden in the land. It is a large, robust grower, perfectly hardy and enormously prolific; and the canes are thickly covered with purplish-red hairs. The leaves are large, dark green above, and silvery-gray beneath. The frnit is borne in large clusters, and each berry is at first tightly enveloped by the large calyx, forming a sort of burr, which presents the appearance of moss rose buds. The berries are of a beautiful, translucent appearance, running through all shades of amber to crimson as they ripen. There is a freshness and brilliancy about them impossible to describe, and we know of nothing in the way of raspberriesso attractive. A bush in full fruiting is a sight not to be forgotten and a decided ornament to the garden. In flavor it is quite distinct, but a decided brisk sub-acid. When cooked it is grand, retaining its rich and sprightly flavor, and surpassing when canned or preserved even the Huckleberry. For jelly making it is without an equal, and from it a delicious wine is made. It begins ripening in July, the berries are produced in great abundance, and it continues in bearing for a long time. Grows readily from seed. Ea., 10c; 3 for 25 ; doz., 75c. (by mail); $\$ 100, \$ 3.00 ; 1000, \$ 20.00$. Transplanted plants, ea., 15c; 3 for 3 šc; doz., $\$ 1.00 ; 100$, \$5.00. Seeds, 15̌c. per pkt.; 2 pkts. for 25c.

## PLYMOUTH ROCK CHERRY.

All growers of light colored cherries are well aware of the two difficulties encountered, viz: the birds taking the fruit and the tendency to quick decay when ripe. Our attention was called to the Plymouth Rock by a fruit grower of wide experience and unusualdiscernment, who informed us that the fruit, though showy and of excellent quality, would remain upon the tree when ripe, or after gathered, in perfect condition longer than any other variety he had ever seen, although an amber variety; and for some unknown reason its fruit was never molested by birds. We confess we did not accept this statement without allowances, but we visited the gentleman. To our unbounded joy and surprise we found the original tree, and others grown from it, heavily laden with large, bright amber, largely overspread with carmine, cherries in perfect condition, although the fruit had been ripe for ten days; during which time it had rained almost every day and the weather excessively hot. Upon testing the fruit freely we found it of not only excellent but high quality-sweet, rich, sprightly, juicy and tender-and with small stone. We gathered a quantity, which we carried two hundred miles and it kept perfectly for $a$ week. The birds avoided it, for some reason as yet unexplained, although trees of all other varieties in the grounds had been stripped of fruit. The tree is a good healthy grower, begins bearing young and is a heavy annual vearer.

As a desirable fruit for the home grounds we are confident it is without an equal; but its greatest value is for market growing-for there is nothing in the way of cherries that can be compared with it as a variety for profit.

Price, 1st ciass, ea., $\$ 1.00 ; 3$ for $\$ 2.50$; doz., $\$ 8.001 \mathrm{yr}$. (by mail), ea., 75 c ; 3 for $\$ 2.00$; doz., $\$ 6.00$.

## DWARF ROCKY MOUNTAIN CHERRY.

Of all the fruit introduced from the West this appears to be the most valuable. This Cherry is of a bushy habit, rarely exceeding four feet in height, and is really a fine ornamental shrub that would grace any lawn, bearing in spring a mass of beautiful white bloom. The advent of this very desirable dwarf cherry will fill a much-needed want, viz., that of a productive dwarf cherry tree for family gardens, for which its early bearingit begins to fruit at two years old-and ease of culture renders it admirably adapted. We consider it a decided acquisition for garden cultivation. Ea., 20c; 3 for 50 c ; doz., $\$ 1.50 ; 100, \$ 10.00$ (by mail).

# Condensed List of Lovett's Tested Seeds. 

The following list has been carefully compiled from our Guide to Horticulture, and embraces all the varieties we carry.

## SEEDS POSTPAID BY MAIL.

Our prices ilmude nrepayment by mail on all seeds ordered by the packet, ounce, quarter pound, pound, pint and quart. Whenever the seeds are sent by express or freight at purchaser's expense, eight cents per pound or fifteen cents per quart may be deducted from the prices quoted.

## WE GUARANTEE SAFE DELIVERY BY MAIL。

On all orders for seeds in packets or ounces, the purchaser may select twenty-five cents extra for each dollar sent, viz: Any one sending $\$ 1.00$ may select seeds in packets or ounces, amounting to $\$ 1.25$; $\$ 2.50$ worth for \&2.00, and so on. But this discount applies only to seed by the packet and ounce, and not by the half pound, quart or pint, and not to other goods offered.

## Lovett's Bouquet Garden.

This is a mixture of over one hundred varieties of free-flowering annuals of easy culture, which will produce a constant and varied bloom the entire season. They include all the well-known favorites, such as Candytuft, Larkspur, Mignonette, Marigold, Balsam, Zinnia and numerous other sorts, which when growing together in such indescribable confusion produces a kaleidoscopic effect, which is very interesting and instructive. Such a scene is constantly changing its aspect as the season advances, new blossoms appearing while others are passing their period of bloom. After blossoming fairly begins, it is possible to be able to gather a bouquet at any time until the plants are killed by frost. Such a mixture is well adapted for sowing in shrubbery or in beds which are expected to receive but little care. Pkt., 10c; oz., 5c; $1 / 4 \mathrm{lb} ., 75 \mathrm{c} ; \mathrm{lb} ., \$ 2.75$.

## BULBS AND PLANTS.

## LOVETT'S NEW CANNAS.

Shown on Next Page.

The following Cannas, with the exception of the Mrs. Eisele, were produced by that hybridizing wizard, Dr. Walter VanFleet. This gentleman, after creating a large number of valuable varieties, a score or more of which have been introduced or are being introduced by Peter Henderson \& Co., A. Blanc \& Co., The Dingee \& Conard Co., The Conard \& Jones Co., W. Atlee Burpee \& Co., and other seedsmen and florists, moved to Little Silver, N. J., bringing with him a vast number of seedlings and a large quantity of seed, produced by successful hybridizing and crossing of the flowers of the best varieties in cultivation. While at Little Silver the Doctor at one time had several thousand seedlings, many of which were of exceeding beauty and distinct from any varieties in cultivation. After considerable bargaining, I purchased of Dr. VanFleet, in 1895, his entire collection of seedlings and his entire stock of plants of same, and since then I have been carefully testing and propagating them. It is needless to say that I discarded a large number of them-in fact I have retained only those of marked character and merit. Realizing the Canna is essentially a bedding plant and that its foliage is an important part of its make-up in the play for popular favor, I have based my estimation of the value of the different sorts, quite as much upon the foliage as the flower: for although the individual flowers are interesting to examine, yet the value of a variety consists in the brilliancy of its bloom in mass, early and continuance of blooming and its foliage. No variety can be satisfactory, no matter what its fiowers are like, unless the foliage is abundant, attractive and enduring. There are already quite too many Cannas on the market with handsome flowers, that are valueless by reason of defective foliage. I positively assert and without fear of contradiction, that the five new varieties here offered are peerless in regard to foliage at least.

Believing the time for fancy prices for new Cannas has passed, I have put the prices of these grand varieties, although now first offered, low enough to permit of their being liberally used for bedding and massing at once-not some years hence.

## CRIMSON BEDDER.

Of compact habit, tiree feet in height, with abundant deep green foliage; narrowly banded with bronzealways clean and fresh and withstanding high winds and all kinds of weather perfectly. Florets large and open, held in a laıge compact truss. bright glowing crimson and borne in such masses as to produce a veritable blaze of color. It sheds or cleans itself of faded flowers as well as the popular Alphonse Bouvier and Chas. Henderson and is the earliest blooming and the freest blooming variety yet produced. In brief it is very like that model of perfection in flower, the Flamingo (one of its parents) in color, size and form of both flower and truss; with the habit of Chas. Henderson (which it surpasses in foliage) and is an exceedingly early and free bloomer.

## GOLDEN BEDDER.

What is said of Crimson Bedder applies to this variety except it is still dwarfer in habit ( $21 / 2 \mathrm{ft}$.) the foliage is light green in color, is smaller as are also its florets, which are a bright golden yellow throughout; except a trace of red at base of the small lower petal. It is the freest and earliest bloomer of its co.or yet produced and is a perfect companion for Crimson Bedder.

## J. T. LOVETT.

The nearest approach to perfection in foliage of any Canna I have yet seen, rivalling in beauty a Banana. Unlike this very decorative plant, its leaves may almost be compared to leather in strength and ability to withstand high winds. In very truth I have never known a leaf of it to be torn, blistered or otherwise damaged by wind. rain or sun. So enduring is it that the ground or first leaves produced upon the plants remain clean, bright and perfect until the ground freezes in autumn -something I have not seen in any other variety. Color of foliage is rich, deep, olive-green throughout; height, five feet. Florets very large and long, set in a
loose open drooping cluster, after the manner of the once popular Ehemanii-the seed-bearing parent-but in color are a rich crimson-lake, and are freely produced early, late and all the time. For graceful habit, exquisite foliage and for effect in massing it is without an equal.

## LEOPARD.

An extremely stocky grower, attaining a height of four feet, with massive foliage of a glaucous, shimmering green and producing a veritable mass of large, compact trusses of very large, open fiowers, which are bright, canary-ypllow, broadly blotched and spotted with rich-reddish chocolate, suggesting at a glance the name given it. It is among the earliest and freest bloomers and the foliage is large and Musa-like in form and color. An exceedingly unique and very distinct variety, equally valuable for massing or planting singly or for vases, tubs, etc.

## MRS. EISELE.

Produced by W. G. Eisele, of Long Branch, N. J., who has devoted many years of time and study to the hybridizing of the Canna and growing seedlings from hybrids and crosses of the best vareties in cultivation of it. Of the thousands of varieties produced and flowered by him, many of which are of great beauty this is perhaps the most valuable. It is of vigorous grov th, attaining a height of six to eight feet, with abundast, very large light green leaves, as tough as a Ficus, and is a most prolific bloomer of bright, cheerful, salmon-pinl flowens, entirely unlike in color any other variety The florets are extra large, held upright and widel expanded, and the trusses are large and full; in fact, full that I have counted as many as twelve to fiftef side shoots in a single truss. Its ability to withsta high winds. its free blooming propensit y. and the size a beauty of its flowers, added to its attractive and no color renders it of untold value. I have purchased entire stock and now first offer it, as I do all the oth

Price, Each 30c; doz., $\$ 3.00 ; 100, \$ 20.00$.
SPECIAL. For $\$ 1.00$ I will send one each of any four; for $\$ 1.25$ I will send one each of
the five varieties (by mail if preferred).

Price; Each, 30c; Doz., $\$ 3.00 ; 100, \$ 20.00$
2 yrs, 9 to 15i \$1.00; I will send by mail, one each of the four varieties shown above. 15 to 24 i wn and introduced by

[^0]:    The flowers of this strain are enormous in size, exquisite in color, and of great substance; most of them are beautifully ruffled and fringed on the edges, and are four to five inches in diameter. Their peculiar merits lie, however, in the great variety of colors, markings, veinings, and stripings, forming unique combinations; many having deep throats of yellow, white, black or maroon, in charming contrast. There is nothing among Petunias that can at all be compared with them either in size, form or colors, and will soon be grown to the exclusion of all other strains of this popular flower. In fact when once seen no one could be satisfied with the old varieties. A notable acquisition to the list of summer annuals. 20 c per pkt.; 3 pkts. for 50 c .
